The PastRx Mission

Fight the Substance Abuse Disorder epidemic ravaging our nation

Drug overdose is now the leading cause of death for Americans under 50. In 2016, nearly 60,000 people died. This tragedy goes far beyond these deaths to the millions of lives hurt by drug abuse, dependency, and addiction.

Deaths, overdoses, and related problems continue their rapid growth. Care providers and governmental agencies are struggling to respond. Mandated Prescription Drug Monitoring Programs (PDMP), additional legislation, penalties, and governmental scrutiny are all rising.

PastRx believes providers must do too much work to assess their patients thoroughly for substance abuse problems. PastRx software makes it easier, faster and more effective to:
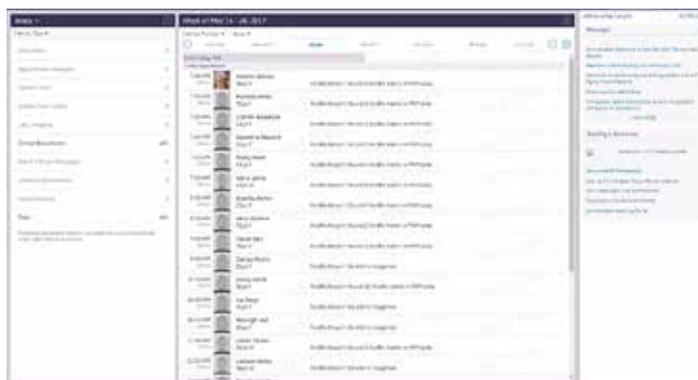

*   Reduce the number of overdose injuries and deaths.
*   Treat patients who need controlled substances without fear of adverse consequences.
*   Get patients suffering from addiction into treatment.

PastRx is a better way to use your PDMP

Your PDMP contains valuable information. PastRx makes PDMP checks easier, faster, and more meaningful.

Integrates easily with your EHR

Example - PastRx integrated with athenahealth

PastRx Seamless EHR Integration

PastRx works within your EHR so your workflow is automated, simple, and seamless.
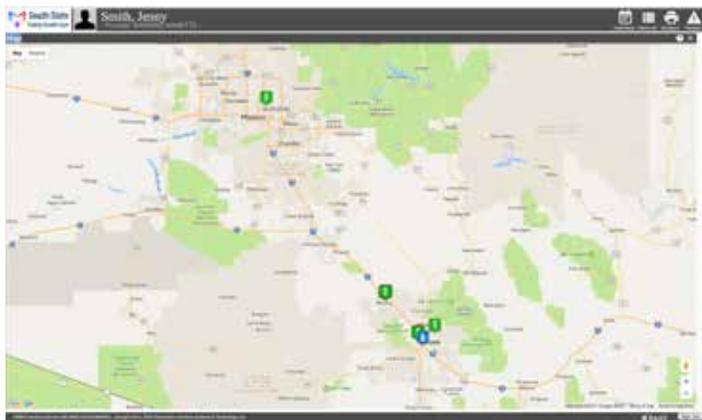

Whether you are seeing scheduled patients or walk ins, PastRx saves time, reduces effort and eliminates frustration.

*   PastRx reduces time spent from over four (4) minutes to a few seconds.

*   PastRx prepares results ahead of the patient encounter, eliminating PDMP wait time.

*   PastRx single sign on means logging into your EHR automatically gives you secure access without having to log in again to our service.

*   You have control over how you view the enhanced data - reports or interactive display.

Past Rx – Immediate Insight into Patient Problems

Imediately identify patents at risk

PastRx organizes PDMP information into clear, intuitive critical findings indicating problem patients and suspect behavior. Summary level alerts identify areas needing investigation while detailed views easily answer questions.

PastRx enhances PDMP data with CDC information, patient history, geomapping, lab results, and other 3rd party data to provide a more complete view of your patient.

PastRx critical findings are not judgements or clinical decisions but tools to focus your attention, saving you time and improving patient care.

PastRx intuitively presents PDMP data, making it easy to see concerns at a glance. Interactive maps show prescriber and pharmacy locations and contact information. Automatic calculations save time including alerts for MME/day, write/fill gaps, outside prescribers, drug interactions and more.

Personalize Your Experience

Healthcare is not "one size fits all." PastRx displays and alerts are tailorable by user or department to reduce alert fatigue and to optimize PDMP information value.

PastRx gives you options. PastRx can be viewed as annotated reports or via interactive displays.

PastRx makes your PDMP more meaningful. Configure critical finding thresholds and ranges to make them relevant to your practice and specialty. Control how information is organized and prioritized.

Tailored critical findings keeps PastRx clear, actionable, meaningful, and intuitive.

Support for Compliance

Most states mandate PDMP checks for prescribers.

PastRx makes it easier to comply. PastRx can automatically post to your EHR chart when you check the PDMP. Be confident that you have an appropriate record of this PDMP review activity.

Technology

PastRx is a HIPAA compliant cloud service that provides secure, powerful results. Built using an open, reliable, and scalable technology core makes PastRx easy to integrate, implement, use, and enhance.

Analytics

PastRx provides analytics covering all your patient encounters. Review clinically valuable analytics from our dashboard or integrate them with your population health and other data initiatives. PastRx reports provide prescriber comparisons, trending analysis, outlier analysis, PDMP utilization, and clinical best practice analysis.
